Sequence 8518, Application US/09949016

Sequence 8518, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 00/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FBASTSEQ for Windows Version 4.0

SEQ ID NO 8518

LENGTH: 977
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 2

Biol. Chem. 267:2326-23231(1992). X

J. Biol. Chem. 267:2326-23231(1992). X

-i- FUNCTION: Component of the protein complex eIF4F, which is involved in the recognition of the mRUM cap, ATP-dependent unwinding of 5'-terminal secondary structure and recruitment of mRUM to the ribosome.

SUBUNIT: eIF4F is a multi-subunit complex, the composition of which varies with external and internal environmental conditions. It is composed of at least EIF4A, EIF4B and EIF4G1/EIF4G3. Interacts with eIF3, mutually exclusive with EIF4A1 or EIFA2, EIF4B and through its N-terminus with PAPBC1. Interacts through the C-terminus with the serine/threonine kinases MKNK1, and with MKNK2. Appears to act as a scaffold protein, holding these enzymes in place to phosphorylate EIF4E (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lamphear B.J., Yan R., Yang F., Waters D., Liebig H.-D., Kl Kuechler E., Skern T., Rhoads R.E.;

Bellsolell L., Cho-Park P.F., Poulin F., Sonenberg N., Burley S.F.
"Two HEAT domains in the C-terminal portion of human EIF4G suppor
binding to EIF4A and MNK1.";
Submitted (MAR-2005) to the PDB data bank.
-i- FUNCTION: Component of the protein complex eIF4F, which is
involved in the recognition of the mRNA cap, ATP-dependent
unwinding of 5'-terminal secondary structure and recruitment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             [19]

CC --- FUNCTION: Component of the protein complex eIF4F, which is involved in the recognition of the mRNA cap, ATP-dependent unwinding of 5'-terminal secondary structure and recruitment of CC mRNA to the ribosome (By similarity).

CC --- SUBUNIT: eIF4F is a multi-subunit complex, the composition of CC which varies with external and internal environmental conditions.

CC It is composed of at least EIF4A, EIF4E and EIF4G1/EIF4G3.

CC IT is composed of at least EIF4A, EIF4E and EIF4G1/EIF4G3.

CC EIF4E and through its N-terminus with PAPBC1. Interacts through CC its C-terminus with the serine/threonine kinases MKNK1, and with GC its C-terminus with the serine/threonine kinases MKNK1, and with GC in place to phosphorylate EIF4E. Non-phosphorylated EIF4E; insulin CC stimulated MAP kinase (MAPK1 and MAPK3) phosphorylation of EIF4G1/EIF4G3 to interact with EIF4E; insulin GC stimulated mAP kinase (MAPK1 and MAPK3) phosphorylation of EIF4G1/EIF4G3 to bind and consequent initiation of translation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RA Okazaki Y., Furuno M., Kasukawa T., Adachi J., Bono H., Kondo S.,

Use of eukaryotic Initiation Factor 4E (elF4E) binding agents e.g. elF4E-binding peptide (elF4E-BP) derivatives as anticancer or antitumor agents for inducing apoptosis in e.g. mammalian tumor cells.

Example; Fig 5; 46pp; English.

The present sequence represents a peptide derived from an eukaryotic Initiation Factor 4G (eIF4G) protein. The specification describes elf and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibitiof, or increased cytotoxicity to tumour cells inhibition eIF4G

The present sequence represents a peptide derived from an eukaryotic Initiation Pactor 4G (e1F4G) protein. The specification describes eIF4G and eIF4E binding agents, such as peptides or peptidemimetics. These binding agents are used for the induction of cell death. The binding peptides are used for inducing cell apoptosis. They are used in pharmaceutical compositions for anticancer or antitumor treatment of mammalian cells. Specifically, the peptides result in growth inhibition of, or increased cytotoxicity to tumour cells. note: the peptide is biotinylated and linked to penetratin
                                                                                                                                                                                                                                                                                                                        Eukaryotic initiation factor; eIF4E; transgenic animal; antidiabetic; knockout mutation; 4E-BP1; glucose metabolism; fat metabolism; anorec drug; anti-obesity; anti-fat deposition; anti-metabolic.
